

ULTIMATE MASTER PROMPT

BUILD A PREMIUM 3D AI + SOFTWARE DEVELOPER PORTFOLIO FOR VULLI KOUSHIK

Build a highly polished, cinematic, interactive, premium personal portfolio website for:

VULLI KOUSHIK

Primary identity:

AI + Software Developer | Full-Stack Developer | Product Builder

Supporting capabilities:

Web Designer | UI Designer | App Designer | AI & Automation Builder

The website must combine:

- premium personal branding
- high-end editorial design
- cinematic photography
- immersive 3D visuals
- interactive 3D animations
- sophisticated micro-interactions
- software engineering credibility
- AI/product-builder identity
- business/freelance capability
- strong storytelling

This must NOT look like a generic developer portfolio.

It should feel closer to a **premium digital experience / interactive product showcase**.

1. CORE CREATIVE DIRECTION

The entire website should communicate:

I build ideas into useful digital products.

The visitor should understand that Koushik can:

- build websites
- build web applications
- design interfaces
- design digital products
- develop software

- integrate AI
- explore automation
- improve existing software
- maintain websites/software
- work with startups
- help local businesses
- work with companies
- help individuals with software requirements

The website should feel:

Technical + Creative + Entrepreneurial + Premium + Human

2. IMPORTANT — USE 3D THROUGHOUT THE WEBSITE

Do NOT limit 3D to a single hero object.

Use carefully designed 3D elements across the entire website:

Hero

- interactive 3D scene
- 3D typography
- depth layers
- floating objects
- subtle camera movement
- interactive lighting
- cursor parallax
- cinematic image reveal

About

- floating 3D identity object
- depth-based typography
- subtle orbital elements

Services

- unique 3D visual representation for services
- floating UI panels
- abstract 3D objects

Projects

- 3D project showcases
- device mockups
- floating browser windows
- perspective transitions
- interactive project environments

Skills

- subtle 3D technology constellation
- rotating nodes
- depth-based typography

Research

- 3D document/paper visualization
- floating data structures
- subtle scientific/AI visual language

Leadership

- layered image collage
- 3D card depth
- spatial transitions

Contact

- immersive 3D closing scene
- floating CTA
- subtle interactive environment

3D must enhance the experience.

Do NOT add random 3D objects just for decoration.

3. TECHNOLOGY

Use:

- Next.js
- React
- TypeScript
- Tailwind CSS

- Three.js
- React Three Fiber
- @react-three/drei
- Lucide React

Use Three.js/React Three Fiber only where it materially improves the experience.

Do not create unnecessary heavy 3D scenes everywhere.

Prioritize performance.

4. 3D DESIGN PRINCIPLE

The 3D style should be:

- elegant
- cinematic
- minimal
- premium
- dark
- sophisticated
- slightly futuristic
- realistic where appropriate
- abstract where appropriate

Avoid:

- cartoonish 3D
- gaming UI
- excessive neon
- cyberpunk
- childish floating icons
- cheap-looking spinning cubes
- random geometric clutter
- excessive particle explosions

The 3D should feel like a **premium automotive/editorial digital experience**.

5. HERO — THE MOST IMPORTANT SECTION

Make the homepage hero extremely immersive.

Use:

100dvh

The hero should initially show the premium founder portrait.

The user moves the cursor and reveals the motorcycle-rider identity through a soft circular mask.

At the same time, introduce subtle 3D depth.

6. HERO 3D ENVIRONMENT

Create a subtle 3D environment behind/around the portrait.

Possible elements:

- extremely subtle floating particles
- soft 3D dust
- depth planes
- abstract curved geometry
- very subtle metallic forms
- translucent depth objects
- slow-moving orbital lines
- soft volumetric-style lighting

Do NOT let these elements compete with the portrait.

The portrait remains the primary visual.

7. INTERACTIVE 3D CAMERA

Use a subtle camera movement.

Mouse movement should produce:

- tiny camera rotation
- subtle parallax
- depth shift

Example conceptual range:

rotation:

x: ± 2 –4 degrees

y: ± 3 –5 degrees

Keep movement restrained.

The user should feel:

"The website is responding to me."

Not:

"Everything is moving everywhere."

8. 3D CURSOR

Create a custom cursor on desktop.

It should be:

- minimal
- circular
- subtle
- responsive

When hovering over:

- projects
- services
- CTA buttons
- interactive objects

the cursor can transform slightly.

Do not use an enormous custom cursor.

Disable or simplify the custom cursor on touch devices.

9. HERO 3D TYPOGRAPHY

Make the main name feel spatial.

Use:

KOUSHIK

Possible effect:

- slight extrusion
- layered shadow
- subtle depth
- parallax

Do NOT make it look like heavy 3D gaming text.

It should remain editorial.

10. HERO CONTENT

Display:

I'm

KOUSHIK

AI + Software Developer

Secondary line:

Full-Stack Developer · Product Builder · Designer

Supporting text:

Building useful software, digital experiences, and AI-powered solutions — from ideas and interfaces to working products.

CTA:

Let's Talk

Secondary CTA:

View My Work

11. HERO IMAGE ASSETS

Use:

/public/images/Base_image.png

/public/images/Reveal_image.png

These two images must be perfectly aligned.

Base:

Professional / Product Builder identity

Reveal:

Motorcycle Rider identity

The reveal must use:

- CSS mask
- radial gradient
- CSS variables

- `requestAnimationFrame`
- React refs

Do not use canvas for the image reveal.

12. HERO IMAGE TRANSFORMATION

Base image:

- premium professional portrait
- dark editorial styling
- founder/product-builder identity

Reveal:

- modern full-face helmet
- premium motorcycle jacket
- bone white
- black
- burnt orange
- dark smoke visor

Exact composition must remain unchanged.

13. 3D HERO OBJECT

Add one primary 3D object to the hero.

Possible concept:

A floating abstract metallic "K"

or:

A minimal sculptural object inspired by product design and engineering

The object should:

- slowly rotate
- react subtly to cursor movement
- have premium material
- use realistic lighting
- remain partially behind/around typography
- never cover the portrait

Do not make it huge.

It should feel like a piece of digital art.

14. HERO 3D LIGHTING

Use:

- dark environment
- soft key light
- warm rim light
- subtle ambient light
- controlled reflections

The 3D lighting should visually harmonize with:

- oxblood
 - burgundy
 - burnt sienna
 - bone white
 - black
-

15. HERO MOBILE

On mobile:

- reduce 3D complexity
- reduce particles
- reduce camera movement
- keep the portrait dominant
- maintain touch reveal
- maintain cinematic feel

Do NOT sacrifice performance for 3D.

Use device-aware quality settings.

16. ABOUT — 3D IDENTITY SECTION

Create:

Building ideas into useful products.

Use a split layout.

One side:

Professional copy.

Other side:

A subtle 3D object representing:

Ideas → Code → Product

Possible visual:

- floating nodes
- connected spheres
- abstract architecture
- small digital blocks
- flowing data paths

As the user scrolls:

- nodes move slowly
- object rotates slightly
- camera shifts subtly

The animation should be scroll-driven but restrained.

17. ABOUT COPY

Use this core idea:

Computer Science is more than a degree for Koushik — it is the foundation for how he approaches problems, builds software, and explores new ideas.

Continue with:

He enjoys turning ideas into products, experimenting with AI, improving workflows through automation, and designing digital experiences that are useful in the real world.

Do not exaggerate.

18. "WHAT I BUILD" SECTION

Create a visually impressive section:

What I Build

Present capabilities:

01 Websites

02 Web Applications

03 AI + Automation

04 UI / UX

05 App Design

06 Digital Products

07 Software Assistance

08 Maintenance & Support

Use 3D visuals for each category.

19. SERVICE 3D VISUALS

Each service can have an abstract 3D representation.

Websites

3D floating browser window.

Web Applications

3D dashboard panels.

AI + Automation

Flowing nodes and intelligent connection paths.

UI / UX

Floating interface frames.

App Design

3D smartphone/device frame.

Digital Products

Abstract modular product blocks.

Software Assistance

Connected software modules.

Maintenance

Stable rotating system/core object.

Keep them abstract and premium.

20. BUSINESS POSITIONING

Make this section clear:

Koushik is available to help:

- local businesses
- startups
- companies
- entrepreneurs
- individuals

with:

- websites
- web applications
- application design
- UI design
- software requirements
- automation
- AI integration
- maintenance
- ongoing technical support

Do NOT present this as a large agency.

Present it as:

Work directly with Koushik.

21. BUSINESS CTA

Use:

Have an idea?

Copy:

Have a business requirement, software idea, website, application, automation, or digital product in mind? Let's turn it into something useful.

CTA:

Let's Talk

22. PROJECTS — 3D SHOWCASE

Create:

Selected Work

Projects should not be ordinary cards.

Use large immersive project scenes.

Each project should have:

- project number
- project name
- category
- description
- technologies
- screenshot
- live link
- GitHub where available

23. AI NEWS HUB — FEATURED PROJECT

Make this the largest project.

Title:

AI News Hub

Subtitle:

AI-Powered Global News Intelligence Platform

Live:

<https://my-ai-news-g99z7sk8g-koushik24.vercel.app/>

Use the real screenshots provided by the user.

Create a 3D browser/device environment.

For example:

- floating browser window
- 3D perspective
- multiple layered screens
- subtle camera orbit
- depth-based scrolling

The screenshot must remain readable.

Description:

A real-time AI platform aggregating news from 150+ global sources with NLP-based summarization, sentiment analysis, and credibility scoring.

Technology:

- Python
- Flask
- HTML
- CSS
- JavaScript
- SQLite
- NLP
- Machine Learning
- REST APIs

24. AI NEWS HUB RESEARCH

Highlight:

Research Paper Accepted

Title:

AI News Hub: A Modular Real-Time System for Multi-Source News Aggregation, Clustering, Summarization, and Credibility Analysis

Conference:

14th International Conference on Intelligent Systems and Embedded Design (ISED2026), NIT Warangal

Submission ID:

2102

Create a subtle 3D research visualization:

- floating paper
- abstract data points
- connected news nodes
- subtle globe/data visualization

Do not fabricate research details.

25. CHAMS CONSTRUCTION

Title:

CHAMS Construction

URL:

<https://chamsconstruction.com>

Show actual website screenshots.

Create a 3D browser mockup.

Highlight:

- responsive web development
- SEO
- AEO
- DNS configuration
- Google indexing
- business email integration

Technology:

- React.js
- HTML
- CSS
- JavaScript
- Tailwind CSS
- Hostinger
- DNS
- SEO
- AEO

26. CHAMS OFFSHORE

Title:

CHAMS Offshore

URL:

<https://chamsoffshore.com>

Show real screenshots.

Use another 3D device/browser presentation.

Do not invent technical details.

27. SGPA / CGPA CALCULATOR

Title:

Academic SGPA & CGPA Calculator

Description:

A responsive web application using weighted grading logic with a clear and intuitive interface.

Technology:

- HTML
- CSS
- JavaScript

Use a small 3D browser/device presentation.

28. PROJECT HOVER INTERACTIONS

When hovering over a project:

- image slightly moves in 3D
- browser mockup tilts
- project title shifts slightly
- cursor changes
- small arrow appears

Use:

transform-style: preserve-3d;

perspective:

Do not overdo the tilt.

29. EXPERIENCE

Create:

Experience

AI / Software Intern — AISIA Labs

Use factual resume-supported information:

- AI application development

- API integration
- data processing
- Machine Learning
- software development workflows
- AI integration into practical applications

Add a subtle 3D timeline.

Timeline can contain:

- floating nodes
- connecting line
- small depth animations

Do not invent confidential information.

30. LEADERSHIP

Create:

Leadership & Community

Student Chapter Head — Andhra Pradesh

Organization:

GARRF

Official website:

<https://garrf.in/>

Create a subtle 3D layered photo/collage experience if images are provided.

Student Campus Ambassador — GITAM

Official:

<https://www.gitam.edu/chat-with-a-student-ambassador>

Present separately.

31. SKILLS — 3D TECHNOLOGY CONSTELLATION

Create:

Technical Skills

Categories:

Programming

Python

Java

C

Web

HTML

CSS

JavaScript

React.js

Tailwind CSS

Database

SQL

DBMS

SQLite

Core

Data Structures & Algorithms

OOP

AI / ML

NumPy

Pandas

OpenCV

NLP

Hugging Face

Machine Learning

Tools

Git

GitHub

VS Code

Selenium

Jira

Do not create percentage bars.

32. 3D SKILLS VISUALIZATION

Create an optional interactive 3D constellation.

Technology categories can exist as:

- floating text nodes
- connected nodes
- subtle orbit

- depth layers

When hovering a category:

- connected technologies become slightly more visible
- surrounding elements soften

Do not make the skills section look like a video game.

33. DESIGN CAPABILITIES

Create:

Design Meets Engineering

Highlight:

- Web Design
- UI Design
- App Design
- Responsive Design
- Product Interface Design
- User Experience Thinking

Use a 3D phone + browser + interface composition.

34. EDUCATION

Create:

Education

B.Tech in Computer Science and Engineering

GITAM Deemed to be University

2023–2027

CGPA: 8.61

Visakhapatnam, Andhra Pradesh, India

Use a minimal 3D academic object or depth typography.

Do not overemphasize education.

35. ACHIEVEMENTS

Include:

Hackathons

- Smart India Hackathon
- BITS Pilani Hackathon, Hyderabad

Sports

Kabaddi Champion

- Lepanga 2.0
- Lepanga 3.0
- Chedugudu

If photos are supplied, create a 3D layered gallery.

Do not invent rankings.

36. CERTIFICATION

Include:

Network Basics — Cisco Networking Academy

Use a minimal presentation.

37. PERSONALITY / HUMAN SECTION

Create a small section showing that Koushik is more than a technical profile.

Possible title:

Beyond Code

Use:

- Kabaddi
- leadership
- building products
- curiosity
- experimentation
- AI exploration

Use provided photos if available.

Create a subtle 3D image-stack effect.

38. CONTACT — IMMERSIVE 3D ENDING

The final section should feel like entering a different environment.

Create:

Let's Talk

Supporting copy:

Have an idea, business requirement, software problem, or product you want to build?

Let's turn it into something useful.

Add:

Let's Talk

Create a subtle 3D environment behind the CTA.

Possible concept:

A floating glowing-but-not-neon digital core surrounded by:

- thin orbit lines
- particles
- subtle depth
- slow camera movement

Use the same visual language as the hero.

39. CONTACT OPTIONS

Display:

Email

LinkedIn

GitHub

Business/software inquiry

Make it easy for visitors to contact Koushik.

If a booking/Topmate link is supplied later, add it as an additional CTA.

Do not invent contact links.

40. NAVIGATION

Desktop:

Left:

K monogram + Koushik

Center:

About

Work

Experience

Research

Services

Contact

Right:

Let's Talk

Mobile:

- circular menu button
- minimum 44px
- accessible

Navigation should remain above the 3D canvas.

41. 3D SCROLL TRANSITIONS

Use scroll-triggered transitions carefully.

Possible transitions:

Hero → About

3D camera gently moves forward.

About → Services

Objects rearrange.

Services → Projects

3D environment transitions into browser/device objects.

Projects → Research

Browser screens dissolve into data/research nodes.

Research → Experience

Nodes reorganize into a timeline.

Contact

Everything simplifies into a single visual object.

Do not create aggressive transitions that make navigation difficult.

42. PERFORMANCE ARCHITECTURE

This is extremely important.

Use:

- React Three Fiber
- Drei
- dynamic imports for heavy 3D sections
- lazy loading
- device-aware quality
- reduced particle counts on mobile
- low-poly geometry where possible
- compressed textures
- appropriate image sizes
- dispose Three.js resources properly

Avoid huge GLTF models unless absolutely necessary.

Do not load 50MB assets.

43. REDUCED MOTION

For:

prefers-reduced-motion

Disable:

- camera movement
- excessive 3D animation
- particle movement
- scroll-based motion
- entrance animations

Keep the content fully usable.

44. MOBILE PERFORMANCE

On mobile:

- use simpler 3D scenes

- lower particle counts
- reduce shadows
- simplify materials
- reduce camera movement
- avoid expensive post-processing
- preserve the main image reveal

The website must remain smooth.

45. 3D ASSET FALLBACKS

Every major 3D component must have a graceful fallback.

If:

- WebGL unavailable
- device is too weak
- reduced motion enabled
- 3D asset fails

then display:

- static image
- CSS depth
- simple animation

Never leave an empty area.

46. ADDITIONAL IMAGES FROM THE USER

The developer should expect the user to provide additional images.

Create support for:

public/

images/

hero/

projects/

research/

leadership/

achievements/

about/

3d/

The user may generate additional images using ChatGPT/image-generation tools.

Do not force the user to provide every image before the website can run.

Use graceful placeholders until assets are supplied.

47. IMAGE TYPES THE USER CAN PROVIDE

Support these optional assets:

Hero

- Base portrait
- Reveal portrait

AI News Hub

- homepage screenshot
- dashboard screenshot
- article screenshot
- AI analysis screenshot
- mobile screenshot
- research poster
- conference photograph

CHAMS Construction

- homepage screenshot
- services screenshot
- mobile screenshot

CHAMS Offshore

- homepage screenshot
- services screenshot
- mobile screenshot

Leadership

- GARRF event photos
- GITAM ambassador photos

Achievements

- hackathon photos
- certificates
- Kabaddi photos
- trophies/medals

About

- additional professional portrait
- candid working photo
- desk/setup photo
- coding/product-building photo

48. ADDITIONAL AI-GENERATED VISUALS

The website should be designed so additional generated images can be inserted later.

Potential visuals the user can generate:

01

Abstract AI neural network environment.

02

Premium futuristic software laboratory.

03

Abstract product-building environment.

04

3D floating browser/interface environment.

05

AI data visualization.

06

Abstract automation workflow visualization.

07

Premium motorcycle/automotive environment.

08

Abstract 3D K monogram.

09

Dark metallic engineering sculpture.

10

Editorial workspace/product-builder environment.

These should be optional.

Never use all of them at once.

49. IMAGE STYLE CONSISTENCY

All generated visuals should follow a consistent art direction:

- dark
- cinematic
- premium
- burgundy/oxblood
- black
- bone white
- burnt orange
- subtle metallic materials
- controlled highlights
- realistic shadows
- high-end editorial photography

Avoid mixing:

- cartoon illustrations
 - random anime
 - colorful stock art
 - unrelated gradients
 - inconsistent visual styles
-

50. IMAGE NAMING

Use predictable names.

hero/

Base_image.png

Reveal_image.png

projects/

ai-news-hub/

home.png

dashboard.png

analysis.png

mobile.png

chams-construction/

home.png

services.png

mobile.png

chams-offshore/

home.png

services.png

mobile.png

sgpa-calculator/

home.png

mobile.png

research/

paper.png

poster.png

conference.jpg

leadership/

garrrf.jpg

gitam-ambassador.jpg

achievements/

hackathon.jpg

kabaddi.jpg

about/

working.jpg

portrait.jpg

3d/

k-object.png

ai-environment.png

51. IMPORTANT — DON'T OVERUSE 3D

3D is a design language, not a requirement to put a spinning object in every section.

Use the rule:

If 3D improves storytelling → use it.

If it only adds visual noise → don't use it.

The most important things remain:

1. content
2. typography
3. photography
4. projects
5. usability
6. performance

52. RESPONSIVE DESIGN

Test:

320px

360px

390px

430px

768px

1024px

1280px

1440px

1920px

At 320px:

- no horizontal scrolling
 - KOUSHIK fits
 - CTA works
 - navigation works
 - text remains readable
 - hero image remains properly positioned
 - touch reveal works
-

53. ACCESSIBILITY

Implement:

- semantic HTML
- proper heading hierarchy
- accessible navigation
- accessible buttons
- keyboard navigation
- focus states
- aria labels
- good color contrast
- 44px touch targets
- reduced motion
- browser zoom

Do not make the 3D canvas the only way to understand content.

54. SEO

Title:

Vulli Koushik — AI + Software Developer | Full-Stack Developer | Product Builder

Description:

Vulli Koushik is an AI and Software Developer, Full-Stack Developer, Web Designer, and Product Builder focused on building useful software, digital experiences, AI solutions, and automation.

Use:

- semantic headings
- Open Graph metadata
- descriptive image alt text
- proper page metadata

55. SOCIAL / PROFESSIONAL LINKS

Use these exact provided links:

GitHub:

<https://github.com/Koushiknani24>

LinkedIn:

<https://www.linkedin.com/in/koushik-vulli-45bba3355/>

AI News Hub:

<https://my-ai-news-g99z7sk8q-koushik24.vercel.app/>

CHAMS Construction:

<https://chamsconstruction.com>

CHAMS Offshore:

<https://chamsoffshore.com>

GARRF:

<https://garrf.in/>

GITAM Student Ambassador:

<https://www.gitam.edu/chat-with-a-student-ambassador>

Do not invent other URLs.

56. PAGE ARCHITECTURE

Use:

HERO

↓

ABOUT

WHAT I BUILD

FEATURED WORK

DESIGN CAPABILITIES

EDUCATION

LEADERSHIP

ACHIEVEMENTS

BEYOND CODE

LET'S TALK

FOOTER

57. TECHNICAL FILE STRUCTURE

Use:

app/

globals.css

layout.tsx

page.tsx

components/

portfolio-hero.tsx

hero-3d-scene.tsx

about.tsx

about-3d-scene.tsx

services.tsx

service-3d-scene.tsx

projects.tsx

project-3d-viewer.tsx

experience.tsx

research.tsx

skills.tsx

design-capabilities.tsx

education.tsx

leadership.tsx

achievements.tsx

contact.tsx

contact-3d-scene.tsx

public/

images/

hero/

projects/

research/

leadership/

achievements/

about/

3d/

58. CODE QUALITY

Use:

- reusable components
- TypeScript interfaces
- clean separation between 3D and normal UI
- proper cleanup
- no unnecessary global state
- no excessive dependencies
- no giant single component

Keep 3D logic isolated.

59. VERIFICATION

Run:

`npm run lint`

Then:

`npx tsc --noEmit`

Then:

`npm run build`

Fix all errors.

Test:

- desktop
 - mobile
 - WebGL
 - reduced motion
 - keyboard
 - touch
 - slow network
 - image loading
 - project links
-

60. PERFORMANCE TARGET

Aim for a premium experience without sacrificing usability.

Prioritize:

- fast first contentful paint
- optimized images
- lazy-loaded 3D
- lazy-loaded below-fold visuals
- GPU-friendly animation
- limited particle counts
- minimal React re-renders

Do not make the website slow simply because it contains 3D.

61. NO GENERIC DESIGN

Absolutely avoid:

- generic portfolio template
 - standard navbar + cards layout
 - purple AI gradient
 - random 3D cubes
 - excessive glassmorphism
 - excessive rounded cards
 - skill percentage bars
 - giant technology logo walls
 - unnecessary loading screens
 - excessive text
 - stock developer illustrations
 - meaningless animations
-

62. CORE VISUAL IDEA

The website should feel like:

A cinematic digital studio built around one person.

Not:

A collection of portfolio sections.

Every section should feel connected.

The visual language should transition from:

Photography

→

Depth

→

3D

→

Software

→

AI

→

Products

→

Business

→

Human personality

63. FINAL BRAND MESSAGE

The website should communicate:

Vulli Koushik is an AI + Software Developer, Full-Stack Developer, Designer, and Product Builder who enjoys solving problems and turning ideas into useful digital products.

And:

For businesses, startups, companies, and individuals with software requirements, Koushik can help design, build, automate, improve, and maintain digital solutions.

Do not make unsupported claims.

64. FINAL EXPERIENCE

When someone opens the website:

They should see the cinematic portrait.

They move the cursor.

The motorcycle identity appears.

They scroll.

The page transitions into a 3D world.

They discover:

Who Koushik is.

Then:

What he builds.

Then:

Real projects.

Then:

AI + software experience.

Then:

Research.

Then:

Design capabilities.

Then:

Leadership and achievements.

Finally:

Let's Talk

The website should make the visitor think:

This person doesn't just learn technology. He builds with it.

And if they have a business/software requirement:

I can approach Koushik and discuss the idea.

Build the complete website to this standard.
